For Loops In C++

CISC 106

April 30th 2009

Project Primer

- Sorting strings in C++
 - Use `strcmp(string1, string2)` function
 - Returns 0 if strings are equal
 - Returns positive if $\text{string1} > \text{string2}$
 - Returns negative if $\text{string1} < \text{string2}$
- Sorting strings in MATLAB
 - Strings must be in cell array
 - Use `sort` function

Project Primer

- Creating structs in C++

- struct Record

```
{  
    string first;  
    string last;  
    int number;  
} List[NUM_RECORDS];
```

For Loops in C++

- **Syntax**

```
for (initial expression; condition; concluding expression)
{
    //Code
}
```

- **Slightly more complex than MATLAB's Syntax**

```
for variable = start : increment : end
    %Code
end
```

For Loops – A Comparison

- In MATLAB
 - You create a vector of values by specifying
 - A start point
 - An end point
 - Maybe an increment
- In C++
 - You set the loop parameters by specifying
 - An initial condition
 - A condition
 - Concluding condition

For Loops – An Example

Accessing ten elements in an Array

- In MATLAB

```
for i = 1:10  
    x = array(i)  
end
```

- In C++

```
for (int i = 0; i < 10; i++)  
{  
    int x = array[i];  
}
```

For Loops – An Example

Accessing every other element in an Array

- In MATLAB

```
for i = 1:2:10  
    x = array(i)  
end
```

- In C++

```
int x;  
for (int i = 0; i < 10; i+=2){  
    x = array[i];  
}
```
