Name: _____

Your Temporary Group Number

TG1   TG2   TG3   TG4   TG5
TG6   TG7   TG8   TG9   TG10

Prof. Hilfbar has managed to convince the Dean of his college that the problem of scheduling review sessions arises often enough that it would be worth it to implement some general system for the University that could be used by Professors to schedule review sessions.

Each of the members of your group is employed by a software company that specializes in custom web applications. You've just received the following email from the immediate supervisor for all three or four of you:

```
I know you've been working on a design for the 2/22 project review
next Tuesday.  However, apparently, the president of our company
thinks that this particular project is going to be key to setting up
a long-term relationship with Prof. Hilfbar's University, so she has
taken a personal interest in your team's work.  She is stopping by
my office at about 3:15 today and wants to see at least a snapshot of
where you are at the moment… not a finished product, but just to make
sure that all the parts (the HTML, the database design, and the Java
code) are underway, and a web site to present all of it is taking
shape.

So, I know this is a pain, but I need you to pull through!    Get
something together on the web—even if it has some holes in it—that we
can show her in about an hour.  She's a reasonable person, so if
there is part you haven't finished yet, or an issue that's
unresolved, just mark it somehow with a comment or something.   If
the formatting isn't beautiful don't worry, as long as a "good start"
on all four pieces is there, she'll be thrilled:
      java code for the business logic,
      database design (a list of the tables you'll need, with the
column names, and some sample data)
      HTML code of "sample screens" for input and output
a paragraph or so of explanation on how it all fits together (i.e.
how users interact with the system.)

I know you won't let me down!

Cheers,
Fred
```

Your TA Emily Gibson and I will be playing the role of Company President, and taking a look at whatever you can get together by 3:15pm today. In a moment you will be free to leave with your group to the nearest computer lab, and see what you can get done by 3:15pm. Do just one thing before you go: confirm with me which of your cisc474 web pages the Company President should check at 3:15PM today. Once you've done that, fly like the wind!
