

Summary

Alternative Energy Source: Geothermal power

Stakeholder: Western Geopower employee

Western GeoPower is a renewable energy company dedicated to the development of geothermal energy projects for the delivery of clean, electricity generation.

Alternative Energy Source: Geothermal power

Stakeholder: Western Geopower employee

My name is Kenneth MacLeod and I am President of Western Geopower Corporation. Western GeoPower is a renewable energy company dedicated to the development of geothermal energy projects for the delivery of clean, electricity generation. The Company geothermal powerplants in California and in British Columbia, Canada. My company is developing a new 25.5 Megawatt (net) geothermal powerplant 75 miles north of San Francisco, California. When we receive government approval and raise the money for this project, the Company intends to have the project producing power by 2010. The residents of Sonoma County will be pleased to know that their electric costs will ultimately be reduced (after a few years of increased costs due to construction and operation) and that their electricity is coming from a renewable and clean source of energy.
