

Space Has Weather?!

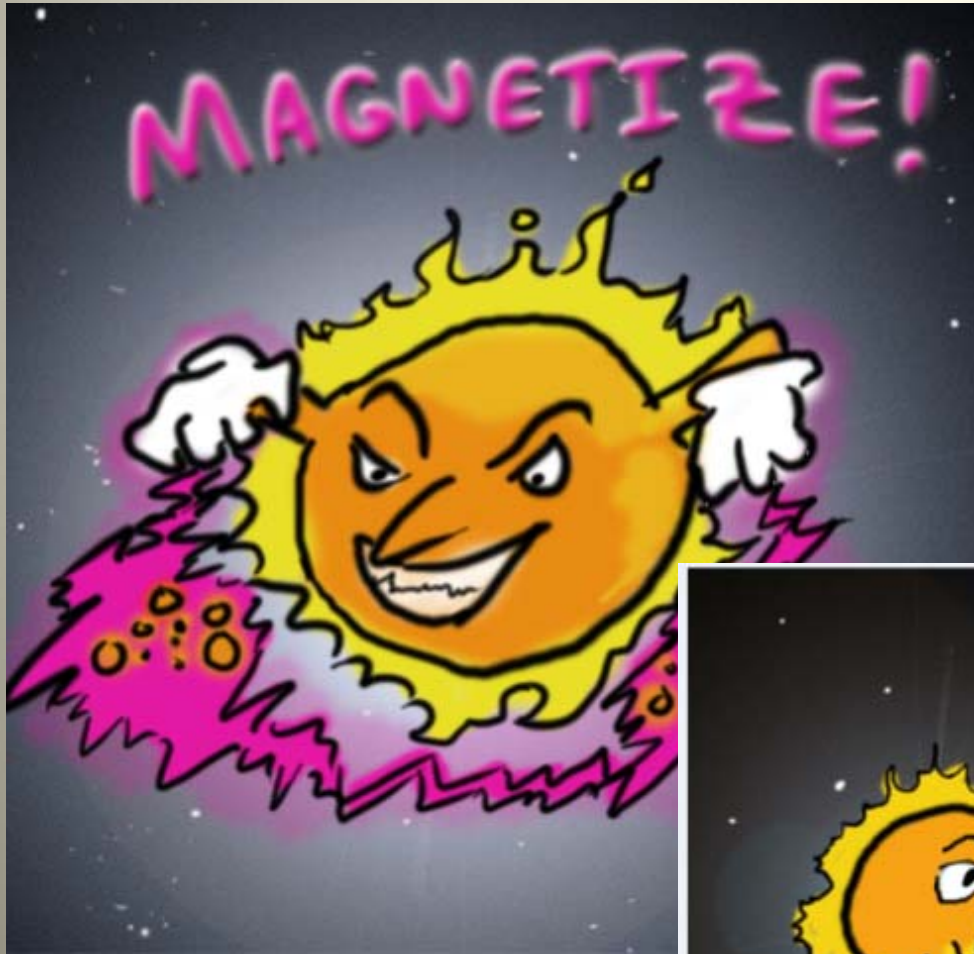

John Meyer

We call it “Weather”
because we like to use the
term “Solar Storm”

A image from the Solar and Heliospheric Observatory (SOHO) shows an erupting coronal mass ejection, with an Earth inset at the approximate scale of the image.

Because the Sun is “magnetized” it magnetizes the stuff around it.

And spits it at us.
FLAMING MAGNETS!!

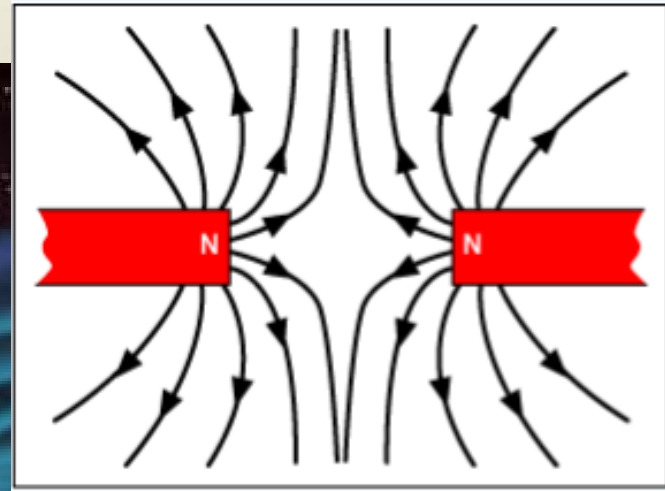

And that's why we wear umbrella hats outside... wait... something's not right here.

I'll still wear mine!

We Have A Shield! Phew.

Flaming magnets are like broccoli

So What?

Just Kidding About the Psychic
stuff!

Damages Satellites
Aurora Borealis
Power Outages
Psychic Powers
