

Heather Thomson
April 7, 2011 Seminar

Sea level rise is an important component of climate change that local governments must adapt for. This presentation will give an overview of how the sea level changes. It will then show recent changes on the national and local level. It will then look at potential future changes in sea level. Policy solutions, such as mitigation and adaptation, will be discussed. Finally, my study of the costs of sea level rise will be informally and preliminarily proposed.
