During the month of May the Steering Committee of the University of Delaware Chapter of the AAUP acted on several issues of importance to the faculty at the University of Delaware. After unanimously rejecting an administration proposal to modify faculty retirement benefits, the Steering Committee unanimously passed two resolutions.

The first resolution rejects the arbitrary changes to CNTT titling which were instituted by the Office of the Provost this spring without appropriate consultation and deliberation:

RESOLVED, that the Steering Committee of the University of Delaware Chapter of the AAUP rejects recent changes to CNTT titling, the process by which those changes were made, and supports the long-standing CNTT titling practices.

The second resolution affirms AAUP-UD support for the Faculty Senate resolution recommending that no fossil burning power plant be constructed on the STAR campus:

RESOLVED, that the Steering Committee of the University of Delaware Chapter of the AAUP supports the University of Delaware Faculty Senate Resolution of May 5, 2014 which recommends that The Data Center project not be constructed on the STAR Campus at the University of Delaware as long as it includes the construction of any fossil fuel burning power plant.
