The artwork used in this calendar was the vision and work of Aaron Deede, a Wilmington, Delaware resident. Mr. Deede has been a dedicated artist for many years and is a member of the Center for Disabilities Studies’ Community Advisory Council. He completed the cover art during a session with the Art Therapy Express Program, a nonprofit organization that partners with people with disabilities to explore and excel in the fine arts. More information on Art Therapy Express Program is available at www.arttherapyexpress.org.

About the Artist

Aaron Deede

Aaron Deede, a Wilmington, Delaware resident, is a dedicated artist for many years and is a member of the Center for Disabilities Studies’ Community Advisory Council. He completed the cover art during a session with the Art Therapy Express Program, a nonprofit organization that partners with people with disabilities to explore and excel in the fine arts. More information on Art Therapy Express Program is available at www.arttherapyexpress.org.
New Directions Early Head Start

Funded by the U.S. Department of Health and Human Services, New Directions Early Head Start (NDEHS) is a community resource for pregnant women, infants, toddlers to age three, and their families. During fiscal year 2006, NDEHS served 203 children — including 24 with disabilities — and 22 pregnant women through its home-based services and partner agencies. An experienced staff creates individualized approaches to education and support, which help address the unique needs of each child. In fiscal year 2006, two staff members received associate degrees in early childhood education, and three earned their Child Development Associate credentials.

NDEHS also helps families identify and reach personal goals to empower parents to guide the healthy development of their children and make positive life changes. In fiscal year 2006, 98% of program families participated in personal goal-setting projects, such as increasing their education, owning a house, or working with a NDEHS child specialist.

By shaping a collaborative service delivery system, diverse partnerships with child-care agencies in New Castle and Kent counties set NDEHS apart. This not only increases the impact of NDEHS but also builds the capacity for quality infant and toddler care throughout the state.

Financials

The Center for Disabilities Studies (CDS) had an operating budget of $4,864,787 from July 1, 2005 to June 30, 2006. Of this total, $2,789,909 was obtained through grants from the Office of Head Start and the Administration on Developmental Disabilities of the U.S. Department of Health & Human Services, Administration for Children & Families. In addition to the operating budget, CDS also received matching support worth over $1,000,000 from the University of Delaware in the form of graduate research assistantships and tuition waivers and support for a wide range of projects and activities.

"My son, Brandon, was diagnosed with a mental delay. But New Directions Early Head Start has helped me a lot in getting the services and supports I need for him." - Gloria Brown, mother
Having completed its second year of operation, The Early Learning Center (ELC) at the University of Delaware is a thriving, interactive organization that continues to surpass expectations. Its three-pronged mission to integrate service, education, and research promotes an interactive learning environment that benefits children, families, university students, and the community. Accordingly, the ELC logged an astounding 6,000 visitors during fiscal year 2006.

With the capacity to hold 227 children, the ELC served a wide range of children from the community over fiscal year 2006, including those living in foster care or poverty. Over 17% of the children served have a disability. The low staff-to-child ratio increases individual attention to each child, which helps the ELC effectively serve children at all developmental levels.

The ELC maintains ties with 18 departments at the University of Delaware, including psychology, physical therapy, music, and hotel, restaurant, and institutional management. Students examine classroom activities from state-of-the-art observation decks, engage in coursework, or participate in daily activities throughout the center. The ELC is also a research hub that offers numerous opportunities for university departments and centers to conduct translational research.

By providing technical assistance, training, and evaluation services, the Early Childhood (EC) Group seeks to improve the quality of programs that support children from birth to early elementary school. The group helps these programs to prevent developmental delays or identify them earlier, include children with developmental delays and disabilities, and assess the outcomes of children. The EC Group’s services reached nearly 600 early childhood educators throughout fiscal year 2006.

Since many federal- and state-funded programs are mandated to document their outcomes, the EC Group works with early childhood programs to assess and articulate results. This helps programs gain a clearer understanding of their strengths and weaknesses. Programs can then convey this information to families or use it to make positive organizational changes.

For instance, during fiscal year 2006, the group conducted a family survey for the state of Delaware’s Birth-to-Three Early Intervention System. This survey gathered families’ perceptions about the services they receive through the system and addressed the requirements put forth by new federal measures.

The EC Group also worked with the Delaware Department of Education to evaluate the pilot full-day kindergarten program. For the second year in a row, the group helped compare the outcomes of full-day and part-day kindergarten models and evaluate the benefits of each.

“I hope and pray that eventually people will start making it easier for individuals with disabilities. And I want these individuals with disabilities to realize that they have a say in helping this to happen.” - Tina Fields, Center for Disabilities Studies’ advisory council member

Veterans’ Day

Thanksgiving Day
The mission of the Center for Disabilities Studies (CDS) is to enhance the lives of individuals and families through education, prevention, service, and research related to disabilities. Through its information distribution and advocacy efforts, CDS increases awareness about the supports and services needed to help people with disabilities fully participate in the life of the community.

Information sharing is bidirectional, and individuals with disabilities bring invaluable advice, knowledge, and experience to CDS. These individuals have a fundamental role in CDS’ programs, projects, and activities. For instance, Tina Fields, an advisory council member and part-time staff member at CDS, and her husband, Tom Fields, attended the Self-Advocates Becoming Empowered Conference in Georgia in May of 2006. “This event allowed people to come together to share opinions and ideas about disabilities and advocacy as well as form new friendships,” reported Ms. Fields after returning from the conference.

Furthermore, with support from CDS, Ms. Fields is organizing a support group for young girls with Turner Syndrome and their families. Through her personal experiences with Turner Syndrome, she hopes to serve as a source of advice and encouragement for these children and families.

Dissemination Highlights
• Presentations at conferences including the LIFE Conference, the Inclusion Conference, the TASH Conference, and other state and national conferences.
• Outreach to community and neighborhood groups.
• delAware: One issue of delAware was published in 2005-2006 which focused on leadership in the disabilities field.
• www.udel.edu/cds: A comprehensive Web site is updated regularly to include news, events, reports, and publications of interest to the public.

Delaware Early Care & Education Workforce Study

A main focus of the Early Childhood (EC) Group’s activities is to evaluate components of the early childhood profession and provide training, technical assistance, and support to its employees. In fiscal year 2006, the Department of Education and the Office of Child Care Licensing funded a new project titled the Delaware Early Care and Education Workforce Study.

The project’s aim is to identify the wages, worker benefits, and experiences of employees in the early care and education professions in Delaware. The rationale behind the workforce study is to determine areas where policy could be used to increase employees’ economic well-being.

The study surveyed 431 early-child-care programs in the state, which employ 6,006 people and serve 38,554 children. This vast sample allowed the EC Group to collect detailed data about the employment, benefits, wages, educational level, etc. of the early childhood workforce.

Major findings thus far include the following: the average employee educational level is a high-school degree; the average wage is $9.44 per hour; and the average length of employment in the profession is 10.6 years.

For more information
Debbie Amsden • (302) 831-3633 • irmc@udel.edu
Community Education

The training activities at the Center for Disabilities Studies (CDS) – often referred to as Community Education – serve those who work in the developmental disability field. During fiscal year 2006, community education activities included five distinct certificate programs with a total of 269 participants. Each certificate program is internally developed at CDS to address a variety of community needs.

The programs offer practical instruction and skills development to direct support professionals, physicians, educators, and other employees in the field. Courses include “Best Practices in the Field,” “Support Coordination,” “Supported Employment,” and “Positive Behavior Supports.” In addition, “First-Line Supervisor Training” educates first-line and middle managers in vocational, day, and residential settings on how to create positive work environments that enhance organizational productivity.

Training sessions are designed to reverse stereotypes and common misconceptions by ensuring that people with disabilities are viewed as active, valued, and important members of society. “New Visions” is a cornerstone course that introduces general information about disabilities, a history of events in the disability community, and the importance of people-first language.

School-Aged Initiatives

The goal of the School-Aged (SA) Group is to create a positive educational climate that promotes the social and academic success of all children. One of the SA Group’s most extensive projects is the Delaware Positive Behavior Support (PBS) Initiative, which provides a comprehensive approach for schools to implement a universal system of behavior support.

During fiscal year 2006, the project worked with 107 (approximately 50%) of the schools in Delaware. One school involved with the PBS Initiative – David W. Harlan Elementary School in Wilmington – received the Delaware Superstars in Education Award for its use of “targeted” positive behavior support interventions to assist struggling students. In 2006, only seven schools in the state were recognized with this award for best practices in education.

Another important project is the Inclusive Schools Initiative, which supports systematic changes that allow children with disabilities to access general education settings and content in the schools. To help ensure that effective models of support exist for children outside the classroom, a project titled the 21st Century Learning Community Grant aims to create positive after-school opportunities in underserved communities.

All these initiatives work together to create a proactive system of support in school and community settings. They further provide strategies for developing individualized interventions to foster inclusive environments that support children with and without disabilities.

First Day of Autumn
The College of Human Services, Education, and Public Policy at the University of Delaware offers an undergraduate minor in disabilities studies that provides students with an opportunity to learn about the policies, laws, and services that affect people with disabilities.

At the end of the 2006 spring semester, 72 students were enrolled in the minor. This number continues to increase over the years. The minor consists of an interdisciplinary approach that attracts students from a variety of majors including biology, engineering, and psychology.

Eighteen credits of coursework include a Capstone Senior Seminar that engages students in hands-on experience through work with local advocacy agencies and people with disabilities. Projects from the past program year include assisting with the National Association for Down Syndrome benefit walk and helping recent high-school graduates with disabilities to find assistive technology.

In the fall of 2005, Jamie Wolfe, Chair of the Delaware Developmental Disabilities Council and a disability specialist at the Center for Disabilities Studies, joined the minor as a co-instructor. The students benefit tremendously from Ms. Wolfe’s extensive professional experience in the policy and advocacy fields and from her personal perspective on living with a disability.

Transition Partnership Project

Designed for 18- to 21-year-olds with significant intellectual disabilities, the Transition Partnership Project (TPP) helps bridge the gap between life as a student and life as an adult. TPP prepares these young adults for independence and new roles, such as work or ongoing education. For over 10 years, the University of Delaware (UD) has partnered with the Red Clay School District to deliver the program. At the end of fiscal year 2006, 24 young adult participants were enrolled.

The program rents an apartment in a local complex near UD as “home base” for the day’s activities. Each morning, the students arrive at the apartment via paratransit and connect with their teachers and paraprofessionals to engage in daily skills training. “We learn how to vacuum and clean the windows, and we cook for each other,” says Amye Klaft.

On campus, participants hold jobs and gain work experience. Josh Watts, who works at a small market in a UD dorm, states, “I like working, and I’ve learned job skills.” Participants also take part in social activities in their apartments and around campus. Christy Seob enjoys going to a local pizzeria while Greg Cloud likes to hang out at UD and go to the football games.

Poised to enter its third year, the REAL (Recreation, Enhancement, and Learning) Program is quickly becoming a hallmark of the Adult Services Group. Founded on the basis of respect, autonomy, and self-determination, REAL goes beyond the pre-kindergarten-to-12th-grade education system and provides opportunities for adults with disabilities in Delaware to explore continuing education. Classes serve as a resource for real-life information and a social setting for students to meet and interact.

During fiscal year 2006, the REAL Program held four sessions and had 210 enrolled students. Each session consisted of five courses designed to guide an exploration of different areas of the student’s life. These courses covered independent living, health and safety, employment opportunities, leadership and advocacy, and the fine arts.

Some REAL students went on job interviews with completed resumes, and some got jobs. Others attended a public education forum to hone their advocacy skills and bring attention to the issues faced by adults with disabilities. Students also learned valuable basic knowledge such as why wearing sun block on cloudy days is important or how to identify a poison ivy plant. One participant in the fine arts track, Aaron Deede, also went on to teach an art class in the technique of making beads out of polymer clay for the REAL Program.

“My favorite part is going to work on campus.” - Christy Seob
Adult Services Initiatives

The goal of the Adult Services (AS) Group is to create model adult services, conduct research in areas relevant to adult services, and provide training to enhance the quality of adult services. One of the primary aims of the AS Group is to help adults with disabilities thrive in their personal lives and in their communities.

During fiscal year 2006, 240 participants enrolled in a variety of programs. These programs included Community Connectors, which helps adults become more active in their communities, and the Leadership, Employment, Advocacy Development (LEAD) Project, which helps young adults with disabilities acquire or strengthen leadership and advocacy skills. In February 2006, the LEAD Project partnered with KenCrest to create a new resource Web site, called TransitionMap, to help teenagers and adults with disabilities successfully move out of the school environment. (For more information, visit www.transitionmapde.org.)

The AS Group also works with those who assist adults with disabilities, such as direct support professionals. In recognition of the critical role these individuals play in the lives of people with disabilities, the group held Delaware’s First Conference for Direct Support Professionals on May 4, 2006. The conference attracted more than 300 people representing over 75 agencies, organizations, and schools throughout Delaware.

The REAL Project

Poised to enter its third year, the REAL (Recreation, Enhancement, and Learning) Program is quickly becoming a hallmark of the Adult Services Group. Founded on the basis of respect, autonomy, and self-determination, REAL goes beyond the pre-kindergarten-to-12th-grade education system and provides opportunities for adults with disabilities in Delaware to explore continuing education. Classes serve as a resource for real-life information and a social setting for students to meet and interact.

During fiscal year 2006, the REAL Program held four sessions and had 210 enrolled students. Each session consisted of five courses designed to guide an exploration of different areas of the student’s life. These courses covered independent living, health and safety, employment opportunities, leadership and advocacy, and the fine arts.

Some REAL students went on job interviews with completed resumes, and some got jobs. Others attended a public education forum to hone their advocacy skills and bring attention to the issues faced by adults with disabilities. Students also learned valuable basic knowledge such as why wearing sun block on cloudy days is important or how to identify a poison ivy plant. One participant in the fine arts track, Aaron Deede, also went on to teach an art class in the technique of making beads out of polymer clay for the REAL Program.

Transition Partnership Project

Designed for 18- to 21-year-olds with significant intellectual disabilities, the Transition Partnership Project (TPP) helps bridge the gap between life as a student and life as an adult. TPP prepares these young adults for independence and new roles, such as work or ongoing education. For over 10 years, the University of Delaware (UD) has partnered with the Red Clay School District to deliver the program. At the end of fiscal year 2006, 24 young adult participants were enrolled.

The program rents an apartment in a local complex near UD as “home base” for the day’s activities. Each morning, the students arrive at the apartment via paratransit and connect with their teachers and paraprofessionals to engage in daily skills training. “We learn how to vacuum and clean the windows, and we cook for each other,” says Amye Klaft.

On campus, participants hold jobs and gain work experience. Josh Watts, who works at a small market in a UD dorm, states, “I like working, and I’ve learned job skills.” Participants also take part in social activities in their apartments and around campus. Christy Seob enjoys going to a local pizzeria while Greg Cloud likes to hang out at UD and go to the football games.

The College of Human Services, Education, and Public Policy at the University of Delaware offers an undergraduate minor in disabilities studies that provides students with an opportunity to learn about the policies, laws, and services that affect people with disabilities.

At the end of the 2006 spring semester, 72 students were enrolled in the minor. This number continues to increase over the years. The minor consists of an interdisciplinary approach that attracts students from a variety of majors including biology, engineering, and psychology.

Eighteen credits of coursework include a Capstone Senior Seminar that engages students in hands-on experience through work with local advocacy agencies and people with disabilities. Projects from the past program year include assisting with the National Association for Down Syndrome benefit walk and helping recent high-school graduates with disabilities to find assistive technology.

In the fall of 2005, Jamie Wolfe, Chair of the Delaware Developmental Disabilities Council and a disability specialist at the Center for Disabilities Studies, joined the minor as a co-instructor. The students benefit tremendously from Ms. Wolfe’s extensive professional experience in the policy and advocacy fields and from her personal perspective on living with a disability.

The goal of the School-Aged (SA) Group is to create a positive educational climate that promotes the social and academic success of all children. One of the SA Group’s most extensive projects is the Delaware Positive Behavior Support (PBS) Initiative, which provides a comprehensive approach for schools to implement a universal system of behavior support.

During fiscal year 2006, the project worked with 107 (approximately 50%) of the schools in Delaware. One school involved with the PBS Initiative – David W. Harlan Elementary School in Wilmington – received the Delaware Superstars in Education Award for its use of “targeted” positive behavior support interventions to assist struggling students. In 2006, only seven schools in the state were recognized with this award for best practices in education.

Another important project is the Inclusive Schools Initiative, which supports systematic changes that allow children with disabilities to access general education settings and content in the schools. To help ensure that effective models of support exist for children outside the classroom, a project titled the 21st Century Learning Community Grant aims to create positive after-school opportunities in underserved communities.

All these initiatives work together to create a proactive system of support in school and community settings. They further provide strategies for developing individualized interventions to foster inclusive environments that support children with and without disabilities.

"The disabilities minor appealed to me because it seemed to fill in the gaps that my major did not offer me. It appeared to explore disabilities on a deeper level."  
- University of Delaware student
The training activities at the Center for Disabilities Studies (CDS) – often referred to as Community Education – serve those who work in the developmental disability field. During fiscal year 2006, community education activities included five distinct certificate programs with a total of 269 participants. Each certificate program is internally developed at CDS to address a variety of community needs.

The programs offer practical instruction and skills development to direct support professionals, physicians, educators, and other employees in the field. Courses include “Best Practices in the Field,” “Support Coordination,” “Supported Employment,” and “Positive Behavior Supports.” In addition, “First-Line Supervisor Training” educates first-line and middle managers in vocational, day, and residential settings on how to create positive work environments that enhance organizational productivity.

Training sessions are designed to reverse stereotypes and common misconceptions by ensuring that people with disabilities are viewed as active, valued, and important members of society. “New Visions” is a cornerstone course that introduces general information about disabilities, a history of events in the disability community, and the importance of people-first language.

A main focus of the Early Childhood (EC) Group’s activities is to evaluate components of the early childhood profession and provide training, technical assistance, and support to its employees. In fiscal year 2006, the Department of Education and the Office of Child Care Licensing funded a new project titled the Delaware Early Care and Education Workforce Study.

The project’s aim is to identify the wages, worker benefits, and experiences of employees in the early care and education professions in Delaware. The rationale behind the workforce study is to determine areas where policy could be used to increase employees’ economic well-being.

The study surveyed 431 early-child-care programs in the state, which employ 6,006 people and serve 38,554 children. This vast sample allowed the EC Group to collect detailed data about the employment, benefits, wages, educational level, etc. of the early childhood workforce.

Major findings thus far include the following: the average employee educational level is a high-school degree; the average wage is $9.44 per hour; and the average length of employment in the profession is 10.6 years.

The mission of the Center for Disabilities Studies (CDS) is to enhance the lives of individuals and families through education, prevention, service, and research related to disabilities. Through its information distribution and advocacy efforts, CDS increases awareness about the supports and services needed to help people with disabilities fully participate in the life of the community.

Information sharing is bidirectional, and individuals with disabilities bring invaluable advice, knowledge, and experience to CDS. These individuals have a fundamental role in CDS’ programs, projects, and activities. For instance, Tina Fields, an advisory council member and part-time staff member at CDS, and her husband, Tom Fields, attended the Self-Advocates Becoming Empowered Conference in Georgia in May of 2006. “This event allowed people to come together to share opinions and ideas about disabilities and advocacy as well as form new friendships,” reported Ms. Fields after returning from the conference.

Furthermore, with support from CDS, Ms. Fields is organizing a support group for young girls with Turner Syndrome and their families. Through her personal experiences with Turner Syndrome, she hopes to serve as a source of advice and encouragement for these children and families.

Early Childhood Initiatives

By providing technical assistance, training, and evaluation services, the Early Childhood (EC) Group seeks to improve the quality of programs that support children from birth to early elementary school. The group helps these programs to prevent developmental delays or identify them earlier, include children with developmental delays and disabilities, and assess the outcomes of children. The EC Group's services reached nearly 600 early childhood educators throughout fiscal year 2006.

Since many federal- and state-funded programs are mandated to document their outcomes, the EC Group works with early childhood programs to assess and articulate results. This helps programs gain a clearer understanding of their strengths and weaknesses. Programs can then convey this information to families or use it to make positive organizational changes.

For instance, during fiscal year 2006, the group conducted a family survey for the state of Delaware’s Birth-to-Three Early Intervention System. This survey gathered families’ perceptions about the services they receive through the system and addressed the requirements put forth by new federal measures.

The EC Group also worked with the Delaware Department of Education to evaluate the pilot full-day kindergarten program. For the second year in a row, the group helped compare the outcomes of full-day and part-day kindergarten models and evaluate the benefits of each.

Early Learning Center

Having completed its second year of operation, The Early Learning Center (ELC) at the University of Delaware is a thriving, interactive organization that continues to surpass expectations. Its three-pronged mission to integrate service, education, and research promotes an interactive learning environment that benefits children, families, university students, and the community. Accordingly, the ELC logged an astounding 6,000 visitors during fiscal year 2006.

With the capacity to hold 227 children, the ELC served a wide range of children from the community over fiscal year 2006, including those living in foster care or poverty. Over 17% of the children served have a disability. The low staff-to-child ratio increases individual attention to each child, which helps the ELC effectively serve children at all developmental levels.

The ELC maintains ties with 18 departments at the University of Delaware, including psychology, physical therapy, music, and hotel, restaurant, and institutional management. Students examine classroom activities from state-of-the-art observation decks, engage in coursework, or participate in daily activities throughout the center. The ELC is also a research hub that offers numerous opportunities for university departments and centers to conduct translational research.

“My son, Brandon, was diagnosed with a mental delay. But New Directions Early Head Start has helped me a lot in getting the services and supports I need for him.” - Gloria Brown, mother
Funded by the U.S. Department of Health and Human Services, New Directions Early Head Start (NDEHS) is a community resource for pregnant women, infants, toddlers to age three, and their families. During fiscal year 2006, NDEHS served 203 children – including 24 with disabilities – and 22 pregnant women through its home-based services and partner agencies. An experienced staff creates individualized approaches to education and support, which help address the unique needs of each child. In fiscal year 2006, two staff members received associate degrees in early childhood education, and three earned their Child Development Associate credentials.

NDEHS also helps families identify and reach personal goals to empower parents to guide the healthy development of their children and make positive life changes. In fiscal year 2006, 98% of program families participated in personal goal-setting projects, such as increasing their education, owning a house, or working with a NDEHS child specialist.

By shaping a collaborative service delivery system, diverse partnerships with child-care agencies in New Castle and Kent counties set NDEHS apart. This not only increases the impact of NDEHS but also builds the capacity for quality infant and toddler care throughout the state.

About the Artist

The artwork used in this calendar was the vision and work of Aaron Deede. A Wilmington, Delaware resident, Mr. Deede has been a dedicated artist for many years and is a member of the Center for Disabilities Studies’ Community Advisory Council. He completed the cover art during a session with the Art Therapy Express Program, a nonprofit organization in Delaware that partners with people with disabilities to explore and excel in art. Find more information at: www.arttherapyexpress.org.
