3100-3000 C-H stretch and overtones
2000-1660 group of weak overtones
1600, 1580, 1500, 1450 in plane vibrations (not seen with all substitutions)

Alcohols:

R-O-H RO-H 3640-3600 sharp if not hydrogen bonded/solvated
3600-3500 m hydrogen bonded or solvated
C-OH 1° = 1050, 2° = 1100, 3° = 1150

-C≡C-H Alkyne C≡C-H 3300 strong and sharp
-C≡C-R -C≡C- 2260-2190 very weak or absent

R-O-R Ethers C-O-C 1150-1070 s

Nitro: 1660-1500(s) asymmetrical stretch
390-1260(s) symmetrical stretch

Amines

- NH stretching
 - in dilute solution, primary amines (RNH_2) display 2 bands, near 3500 and 3400 cm^{-1} . These represent 'free' asymmetrical and symmetrical stretches.
 - in dilute soln, secondary amines (R_2NH) display one band near 3350-3310 cm^{-1} .
 - weaker and sharper than OH

- neat primary aliphatic amines (alkylNH_2) absorb at 3400-3300 and 3330-3250 cm^{-1} . ArylNH_2 absorb at slightly higher frequencies.

Alkynes

- C≡C- stretch: weak absorption at 2260-2100 cm^{-1}
 - not observed for symmetrical alkynes (v. weak for 'pseudo' symmetric alkynes)
 - terminal alkynes (R-C≡C-H) absorptions are stronger than internal (R-C≡C-R) absorptions
- C≡C-H stretch:
 - 3333-3267 cm^{-1}
 - strong, narrow (as compared to OH or NH)
- C≡C-H bend:
 - 700-610 cm^{-1} : broad, strong absorption
 - 1400-1220 cm^{-1} : overtone of above

EXOCYCLIC

Double bond has an atom that is part of a ring that the other is not.

NOT EXOCYCLIC

2-exocyclic components

Alkanes

Fragmentation tends to favor more stable carbocation
Remember: you only see the charged fragment in the MS.

Alkenes/Alkynes

Also McLafferty-like fragmentation

Halides:

Note: unique isotopic ratio of most halides!

Aromatic:

Alcohols

Note: molecular ion is often weaker or absent.
alpha cleavage and dehydration are common fragmentations

ROR Ethers

Notes: molecular ion is often weak
alpha cleavage are common fragmentations

Carbonyls:

Ketones and Aldehydes /Esters, Acids,Amides:
Major Fragmentation pattern is alpha cleavage resulting in loss of side-chain and formation of acylium ion

Also McLafferty Rearrangement where possible!
