

Technology Survey

Recent technological advances have dramatically increased the available alternatives that people use for the transmission of information. In the past, people relied on technologies like telephones, radio, newspapers, magazines, television, and mail for the purposes of information, entertainment, and communication. Now, new developments have given people more options to access and share ideas and information.

I am interested in learning about the different ways and reasons why people use technology in their daily lives. Your assistance is very important and greatly appreciated. Thank you.

1. What types of new technology, devices, channels do you use in your daily life (e.g., email, Instant Messenger, WWW)? Please list them in the Table below.
2. For each technology your listed in Question 1, please list **ALL** the possible reasons **WHY** you use that particularly technology, device, or channel.
