Help us learn more about people with stroke.

WHO IS ELIGIBLE TO PARTICIPATE?
We are looking for individuals 18–80 years old who have suffered a stroke.

WHAT IS INVOLVED?
A brief screening by phone will determine whether you meet the initial criteria to participate in a study. If you are eligible, a detailed clinical evaluation to assess your balance, walking, coordination and overall mobility will take place. After this, if you qualify for another study, you may be invited to participate.

Participation is voluntary and you may withdraw at any time.

All testing will be performed through the Delaware Rehabilitation Institute on the University of Delaware campus in Newark, Delaware.

PATIENT BENEFITS
- There is no fee for participation.
- Monetary compensation may be available for participation in some studies.
- Transportation available for some studies. Other studies may offer travel compensation.

Call the DRI office for more details.

HOW DO I BEGIN?
Please contact Jennifer Marmon. She can answer any questions you have or schedule you for participation in a study on stroke rehabilitation.

How can we improve REHABILITATION after a Stroke?

The Delaware Rehabilitation Institute (DRI) is working hard to advance the science of physical rehabilitation. Our researchers are conducting several studies investigating new techniques to examine how brain damage affects performance and to improve function after a stroke.

Volunteers who participate in our research will help us learn more about people with stroke. Our findings from these studies will help us understand how the brain works after stroke and design future rehabilitation protocols.

- NO FEES TO PARTICIPATE
- POTENTIAL TRANSPORTATION
- MOBILITY EVALUATION
- MONETARY COMPENSATION
