Mary Ann,

Unfortunately, biology will not be able to offer BISC671 in spring 2018 or probably not in fall 2019. We are hopeful that as UD hires in the microbiology area, we will attract some immunologists and be able to get this course back up. I do think it's a good idea to remove BISC671 as a required course for your PhD students. I wish I had a different answer as this is a serious shortcoming at UD.

Thanks, Robin

Good morning, Dr. Morgan.

This is my annual request to find out if a final decision has been made or is anticipated for a replacement faculty for the BISC671 Cellular and Molecular Immunology course. I think, regardless, I am going to recommend to our Medical Sciences PhD program committee that we remove the course as a required core course and put it in the listing of possible science electives, just in case someone eventually is found to teach it. I hope so...it was a good one!

Mary Ann McLane, PhD, MLS(ASCP)
