

## CLSS Rules and Error Messages

1.  Error

An Error indicates that the section or scheduling unit may not be saved as is. The error description will give the rationale and possible solutions to the error. The Save As-Is or Start Workflow buttons will not be available if there is any error present. To save the section, correct the error then attempt to save again.

2.  Warning

A Warning indicates that the section or scheduling unit may be saved, but caution should be taken before completing the schedule. The warning description will give the rationale and may list possible issues that may arise from this section. The Save As-Is Button will appear if the validation only required a warning and not a workflow or error. Warnings do not require any further workflow or approval to be saved.

3.  Workflow

Workflow indicates that the section or scheduling unit may be saved as is but approval will be required to complete entry of the schedule into UDSIS. The workflow description will give the rationale. The Start Workflow button will appear when validating a scheduling unit as a whole in Design Mode. When saving a section in Design Mode the workflow indicator will show, but the Save As-Is button will display. In Design mode all workflow takes place at one time for the entire scheduling unit. In Refine Mode when the section is saved the Start Workflow button will appear and the section must be sent through workflow on its own.
